

360° VIEW

Increase safety in your warehouse by giving the driver of a vehicle a better idea of his surroundings. Accidents in warehouses often occur due to limited driver vision. By giving the driver a 360° view of all around the vehicle, operational safety is increased.

4 cameras are mounted so that we can form a complete picture of the front and back and both sides for an optimal view around the vehicle. The images are visible on the multivision monitor. This way we do not have the distorted image that a bird's eye view creates, but a split screen with all 4 image views. This allows the driver to see a possible collision more quickly and therefore also reduces the possible damage to your vehicles, goods and warehouse and also to people. Below you can see an example of our 360° solution on a forklift.

1. Vooraanzicht
2. Rechter aanzicht
3. Linker aanzicht
4. Achter aanzicht
