

## Increase security in your warehouse.

Top-Vision offers a new safety solution to optimize security in your warehouse namely The Red Zone Danger Area Light.

In 40% of the accidents with a forklift, there is a pedestrian involved. To ensure and increase the safety of pedestrians in your warehouse, we come up with a solution, namely The Red Zone Danger Area Light. This system ensures that pedestrians keep a safe distance from the truck.

### HOW DOES IT WORK?

*The Red Zone Danger Area Light* projects a bright red line on the floor to keep pedestrians at a safe distance. You can adjust the required distance depends on the type of truck. The system can be used on any Handler: voltage 10-80V. The Red Zone is mounted on the sides of the truck. It may possibly also at the rear.

## PREVENTION OF ACCIDENTS

Thanks to the red line projected by the Red Zone, pedestrians know at all times at which safe distance they must remain. In that way, it prevents from accidents. The most common accidents involving trucks are foot injuries and swing out of the truck. But with The Red Zone these types of accidents are prevented.

You can also use the Red Zone in place of the blue spot. The Red zone is also available in Blue.
